THE  
DOSES AND STRENGTHS  
OF THE  
**BRITISH PHARMACOPŒIA, 1898.**

---

“The Doses mentioned in the Pharmacopœia are intended to represent the average range, in ordinary cases, for adults. They are meant for general guidance, but are not authoritatively enjoined. The medical practitioner must act on his own responsibility as to the doses of any therapeutic agents which he may administer.” Preface to the British Pharmacopœia, 1898.

Where two doses are indicated in relation to the same drug, if not otherwise stated, the smaller is intended *for repeated administration*, and the larger *for a single dose*.

**The Strengths.**—The calculations are based on the rule—“Solids by weight and Liquids by measure, excepting where otherwise stated;” and all important changes are duly noted.

**The Scheduled Poisons** named herein are printed in italics, thus—*Acidum Arseniosum* (1); *Chloral Hydras* (2). The numbers (1) and (2) refer to Parts 1 and 2 of the Poison Schedule.
